

Assignment Instructions

Assessment 2: Group Project Presentation

Due Date: 10 September 2026, 14:00 ACST (Darwin local time)

Weighting: 40%

Group Size: 4 students

This assessment must be completed in a group. Individual work submissions will not be accepted.

This assessment requires that your team address **Objective 1 only**, which is outlined in the folder **Unit Assessment > Project Brief**. You must carefully read the project brief **first**.

This assessment requires that apply the data science skills learned in Weeks 1 to 5 of this unit.

All your data analyses and visualisations must be done in Python. Microsoft Excel can be used but only for preparing your raw datasets. Data wrangling and all other analyses must be done with Python.

To make this assessment as authentic to the real-world data science projects as possible, note that the project objective is intentionally presented as a high-level, open-ended requirement. This not only allows a diversity of approaches to tackling the problem but also tests your team's ability to solve the problem independently (rather than being told exactly what to do).

Like most real data science projects, gaining some understanding of the specific problem domain will help you succeed in this assessment.

Grading

Please see the grading rubric for detailed marking criteria. Your instructor reserves the right to further differentiate individual grades where necessary, as explained in the section "Individual Marks" below.

Deliverables

Submit your work no later than the stated due date of this assignment to avoid any late submission penalties.

A recorded group presentation:

1 URL to a *single* recorded presentation per team published as 'unlisted' on YouTube. Do not submit multiple recordings. Do not submit any recording file unless requested specifically by your lecturer.

Important: The recorded presentation **must** contain individual segments. Each segment is presented by an individual team member with the following requirements:

- Each segment duration: max 3 mins.
- Each presenter must start by showing a CDU student ID.
- Each presenter must show their face throughout the presentation.
- The presenter must use a PowerPoint slide.

Altogether, your team presentation is expected to last no more than 12 minutes, +/- 30 seconds.

In addition to presenting the outcome of each analytic task required by **Objective 1**, the presentation should include a brief introduction to the methodology, lessons learned, and overall conclusion.

Access to Python code:

1 URL to a OneDrive / GitHub / BitBucket repository containing all Python files and the datasets used for this assessment.

AI usage declaration form:

A copy of the signed AI Usage Declaration Form:

- Include a clear acknowledgement of the use of generative AI.
- A reflective account of the use of generative AI in the project, accompanied by a URL to AI conversation history where applicable.
- Please use the following template:

AI Usage Declaration Form v2.docx

Other relevant supporting materials (optional):

You may submit any supplementary items to further address the marking rubric requirement.

Mark penalty

The group or individual marks may be deducted for:

- Significant excess in presentation duration.
- Not displaying CDU student ID.
- Not displaying face.
- Excessive background noises that significantly reduce presentation quality.

Submission Guidelines

Please submit one (1) .zip file containing:

- YouTube link of the recorded presentation
- A copy of the AI Usage Declaration Form signed by all team members
- A text file (.txt) containing a link to Python codes on OneDrive, GitHub or BitBucket.

Submit your .zip file via Learnline *no later than* the stated due date of this assignment.

- Email submissions will not be accepted.
- Do not submit multiple documents.
- Late submission penalty may apply in accordance with CDU policy (<https://policies.cdu.edu.au/view-current.php?id=177#major4>).

Originality

Do not plagiarise from other student groups.

Do not engage in contract cheating. Providing contract cheating services is a criminal offence in Australia, punishable by imprisonment and/or hefty fines. Reference:

<https://universitiesaustralia.edu.au/media-item/cheating-the-system/>
(<https://universitiesaustralia.edu.au/media-item/cheating-the-system/>).

You may choose to use generative AI tools (e.g., Claude, ChatGPT, Gemini, DeepSeek or others) to brainstorm or assist with your Python coding. However, you must be able to demonstrate that you understand all elements of your code and their functionality.

The evaluation of your work focuses on the quality of your approach and results, not on beautiful AI-generated slides. If you use AI in the preparation of your slides, these must be clearly acknowledged in your AI Usage Declaration Form that is signed by all.

Failure to submit a complete and signed AI Usage Declaration Form shall render your submission incomplete and will attract a penalty of 5% of the total assessment mark available, for each calendar day late.

Violating the originality requirement may constitute a serious breach of academic integrity, leading to significant loss of marks or even not passing the unit.

Individual Marks

This unit is committed to ensuring that each team member contributes his or her fair share of the group work.

All student have the responsibility to clearly document their contributions. Failure to provide satisfactory evidence of individual contributions may result in loss of marks or not passing this assessment for the student involved.

All teams **must** document their creative process **only on** the **Microsoft Teams** space that is set up by your campus lecturers. Other platforms (WhatsApp, Facebook, Discord, etc.) cannot be used as evidence of collaboration without any prior agreement with the campus lecturers.

Your interaction with your team members on Microsoft Teams will be closely monitored and may be used to further differentiate individual marks. Your instructor reserves the right to differentiate individual grades where appropriate.

The group mark may not be released to the students if this requirement is not met by the submission due date.

If in doubt, please contact your campus lecturers.

Academic integrity and assessment irregularities

Academic integrity is a core value at CDU and must be upheld at all times when completing this assignment. You must not plagiarise the work of others. Please refer to the [Students - Breach of Academic Integrity Procedures](https://www.cdu.edu.au/current-students/student-code-conduct/academic-integrity) (<https://www.cdu.edu.au/current-students/student-code-conduct/academic-integrity>).

Other assessment irregularities are governed by CDU's [Higher Education Assessment Procedures](https://policies.cdu.edu.au/view-current.php?id=177) (<https://policies.cdu.edu.au/view-current.php?id=177>).

Attach the .zip file in the submission space below.
